The screenshot shows a web browser window with the URL make.wordpress.org in the address bar. The page has a dark header with the WordPress logo and navigation links for Showcase, Themes, Plugins, Mobile, Support, Get Involved, About, Blog, and Hosting. A prominent blue banner at the top features the text "Make WordPress" and "Whether you're a budding developer, a pixel-perfect designer, or just like helping out, we're always looking for people to help make WordPress even better." Below this is a photo of a large group of people standing outdoors. The main content area is titled "There are many different ways for you to get involved with WordPress:" and lists several team sections: Core, UI, Accessibility, Mobile, Support, and Polyglots. Each section includes a brief description and a link to learn more.

Make WordPress

Whether you're a budding developer, a pixel-perfect designer, or just like helping out, we're always looking for people to help make WordPress even better.

If you want to get involved in WordPress, this is the place to be. We've got blogs for each contributor group, general news, and upcoming events.

There are many different ways for you to get involved with WordPress:

Core
The core team makes WordPress. Whether you're a seasoned PHP developer or are just learning to code, we'd love to have you on board. You can write code, fix bugs, debate decisions, and help with development.
[Learn more about Core »](#)
Weekly IRC chats: Wednesdays @ 20:00 UTC
#wordpress-dev on freenode.net

UI
The UI group is focused on the designing and developing the user interface. It's a home for designers and UXers alike. There are regular discussions about mockups, design, and user testing. [Learn more about UI »](#)

Accessibility
The a11y group provides accessibility expertise across the project. They make sure that WordPress core and all of WordPress' resources are accessible. [Learn more about Accessibility »](#)
Weekly IRC chats: Wednesdays @ 19:00 UTC
#wordpress-ui on irc.freenode.net

Mobile
The mobile team builds the iOS, Android, Windows, and Blackberry apps. Lend them your Java, Objective-C, or C# skills. The team also needs designers, UX experts, and testers to give users an smooth experience on every device. [Learn more about Mobile »](#)

Ideas

WordPress の未来に提案

The screenshot shows the 'Ideas' page from the WordPress.org website. The URL in the browser is wordpress.org/ideas/. The page features a dark header with the WordPress logo and navigation links for Showcase, Themes, Plugins, Mobile, Support, Get Involved, About, Blog, and Hosting. A prominent blue button says 'Download WordPress'. Below the header, there's a search bar and a login form. The main content area is titled 'Ideas' and includes a sidebar with links to Extending WordPress, Plugins, Themes, Mobile, Ideas, and Kvetch!. The main content area displays a message about the community proposing ideas and a call to action for complaints via Kvetch!. It also shows statistics: '4,138 IDEAS, 71,112 VOTES, AND COUNTING'. Two sections are shown: 'Latest Ideas' and 'Most Popular Ideas', each listing several proposals with their titles, descriptions, star ratings, and vote counts.

WordPress Media Gallery - Please, that can't be true ...

 **rwoood**
Member

Well, even if Jane Wells has closed a topic about the default media gallery in wordpress with the words "if you need a working one, go take a plugin", well, than there should be no function like this in wordpress. Or even a small function which works the minimum!

Please don't get me wrong: But it makes me a little bit upsad to find out things like this in a modern web application like wordpress considers to be. Sorry but, who was the rogue, who put hard coded css style into the media.php? huh? I can't believe that this has been done in one of the most modern web applications around? I deeply hope that this littel shameful boob is fixed in WordPress 3 or maybe 2.9.2.x.

No big deal? Well, the problem is, that I may can change it easely by taking it off the media.php, but when I update WP version, I probably forgot that I have

What's has Changed in 3.9?

The screenshot shows the homepage of the EditorConfig website. At the top, there's a navigation bar with links for "EditorConfig", "About", "Blog", "Contact", and "GitHub". Below the navigation is a large logo of a cartoon mouse wearing glasses. A sidebar on the left contains a "PAGE CONTENTS" section with links to "What is EditorConfig?", "Example File", "File Location", "File Format Details", "Download a Plugin", and "Contributing". There are also two buttons: "Project Page on Github" and "Follow Us on Twitter". At the bottom of the page, there are social sharing icons for Twitter, Facebook, and LinkedIn, along with a "Tweet" button and some statistics: 1,048 tweets, 8+1 likes, and 432 shares. The main content area features a section titled "What is EditorConfig?" with a brief description and a larger section titled "What's an EditorConfig file look like?" with an example code snippet.

The screenshot shows a terminal window on a Mac OS X system. The title bar says "UNREGD ~ /vagrant-local/www/wordpress-develop/.editorconfig". The window contains two tabs: ".editorconfig" and ".editorconfig.org". The ".editorconfig" tab is active and displays the following code:

```
1 # This file is for unifying the coding style for different editors and
2 # editorconfig.org
3
4 # WordPress Coding Standards
5 # http://make.wordpress.org/core/handbook/coding-standards/
6
7 root = true
8
9 [*]
10 charset = utf-8
11 end_of_line = lf
12 insert_final_newline = true
13 trim_trailing whitespace = true
14 indent_style = tab
15
16 [*.*json]
17 indent_style = space
18 indent_size = 2
19
20 [*.txt,wp-config-sample.php]
21 end_of_line = crlf
22
```

At the bottom of the terminal window, it says "ASCII, 411B, Sunday Mar 02 13:36:36 2014, Line 7, Column 12".

What's has Changed in 3.9?

プラグインデレクトリのシンボリックリンクに対応

plugins_url()などの関数での挙動が修正

The screenshot shows a web browser window with the following details:

- Title Bar:** WordPress > Symlinked Plugins in WordPress 3.9
- Address Bar:** make.wordpress.org/core/2014/04/14/symlinked-plugins-in-wordpress-3-9/
- Header:** WordPress Core! (with Log In and Register links)
- Post Content:**
 - Author: Ryan McCue (Profile Picture)
 - Date: 11:12 am on April 14, 2014
 - Tags: 3.9 (29), 3.9 dev notes (11), plugins (23), symlinks
 - ## Symlinked Plugins in WordPress 3.9

One of the cool little features included with 3.9 is the ability to symlink plugin directories. While it has been possible to symlink plugins in the past, functions such as `plugins_url()` return the wrong URL, which causes breakage in most plugins.

In #16953, r27158 and the followup r27999, we corrected this with the help of a new function: `wp_register_plugin realpath()`. This function is called automatically during the plugin loading phase, and registers which plugin directories are symlinked, and where they're symlinked to. This functionality is then used by `plugin_basename()` (the core of `plugins_url()`, along with other functions) to reverse symlinks and find the correct plugin directory.

This enhancement means that you can symlink individual plugin directories, or even the whole plugins directory itself.

For anyone who'd like to use this, keep in mind that there are a few caveats:

 - Single-file plugins are not handled by this code. Any plugins you'd like to symlink must be in subdirectories of the main plugins folder. This restriction is due to the way these paths are registered.

You can still symlink single-file plugins, however any use of `plugin_basename()` will be as broken as it was before 3.9. This is not a huge issue, as the main use of this is in `plugins_url()`, which is not frequently used in single-file plugins.

Wordpress is moving towards becoming a fully-fledged application framework, and we need new APIs. This project was born to create an easy-to-use, easy-to-understand and well-tested framework for creating these APIs, plus creating APIs for core.

Requires: 3.9 or higher
Compatible up to: 3.9.2
Last Updated: 2014-7-25
Downloads: 14,401

This plugin provides an easy to use REST API, available via HTTP. Grab your site's data in simple JSON format, including users, posts, taxonomies and more. Retrieving or updating data is as simple as sending a HTTP request.
